Introducing

# PosterRail

A professional solution for indoor suspended posters and hanging banners in exhibition halls, shopping centres, museums and art galleries.

A two part aluminium assembly, PosterRail can be used with poster materials from this paper to fabrics up to 0.4mm (0.016") thick.

PosterRail is also very easy to use. No edge preparation necessary — no hems to stitch — just cut to size and insert. To secure, squeeze the cam plate closed and hang the poster.

PosterRail is a complete fastening system. There is a 'T' slot at the top into which specially made hooks, eyes and other accessories can be inserted. End caps close off the ends providing a neat professional finish for any hanging sign.

How PosterRail works:

1. Open the cam plate,

2. Push the banner in,

3. Close the cam plate.

**PosterRail is available from:**
